RELIABILITY SPECIFICATION

Description	Test Conditions	Characteristics Drift
Dry Heat Test	Elements are placed in a oven of temp. at 85°C± 5°C for 1000 (+48, -0)hr. After test the elements are stored in room temperature for one hour.	\triangle R after test are less than ± 3%. \triangle B after test are less than ± 2%.
Cold Test	Elements are placed in an oil bath of temperature at -40°C± 5°C for 1000 (+48, -0)hr. After test the elements are stored in room temperature for one hour.	\triangle R after test are less than ± 3%. \triangle B after test are less than ± 2%.
Thermal Shock Test	-40°C Air,10 minutes) -> RT(Air, under 1min) -> 85°C Air, 10 minutes) for 5000 cycle. After test the elements are stored in room temperature for one hour.	\triangle R after test are less than ± 3%. \triangle B after test are less than ± 2%.
Damp Heat Test	Elements are placed in a chamber of temp. at 40°C± 2°C and 85%RH for 1000 (+48, -0)hr. After test the elements are stored in room temperature for one hour.	\triangle R after test are less than ± 3%. \triangle B after test are less than ± 2%.

Mechanical Test

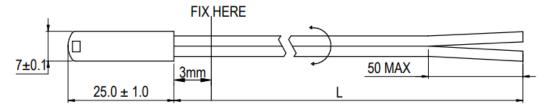

1.Terminal tensile strength test

Load tensile stress of 29.4N to axial direction slowly and keep it for 30±5 sec. after the test characteristics, there should not be any physical damage or abnormalities in product characteristics.

2.Terminal bending test

The wire will be fixed at 3mm from its probe end. Apply load of 29.4N to the wire so that is makes 90 degree. Then put it back to original position. After two times of this action, characteristics, appearance of sensor shall not change.
